

Chanyeong (Edward) Yun

Bournemouth, UK | +44 7988 186051 | edward767976@gmail.com | linkedin.com/in/chanyeongyun | github.com/edwardyun12

EDUCATION

Bournemouth University

BSc (Hons) Software Engineering — Predicted First Class Honours

Bournemouth, UK

Jun 2027 (Expected)

- Elected Student Representative for **100+** Software Engineering peers; relevant modules include Systems Design, Full-Stack Development, and Machine Learning & Deep Learning

EXPERIENCE

AI Software Engineer (Intern)

Bespín Global (AWS Premier Partner)

Jun 2026 – Jul 2026

Seoul, South Korea

- Engineered a RAG pipeline over enterprise insurance documents on AWS Bedrock, tuning a self-hosted open-weight LLM (Qwen3.5-35B-A3B) to **94% golden-set accuracy** — within 1 percentage point of a Claude Sonnet 4.6 baseline — while cutting **\$250/day** in API costs to **\$0** via fixed-cost GPU inference
- Diagnosed multi-hop retrieval failures in pure vector-similarity search and proposed an **ontology-based knowledge graph**, modeled on Palantir's Ontology framework, to encode insurance domain relationships explicitly for graph-aware retrieval
- Designed an LLM-based query classification pipeline (Claude Haiku, Bedrock) across 21 business domains, reaching **93.24% accuracy** (Macro F1 0.94) via a two-stage, evaluation-driven guideline-generation architecture

Squad Leader, Sergeant (Mandatory Service)

Republic of Korea Army — Tactical Systems & Communications

Sept 2024 – Mar 2026

South Korea

- Led a squad of 8+ personnel managing tactical communication infrastructure and resolving hardware and signal issues, earning a **Company Commander's Commendation** for excellence in communications and leadership during a large-scale field exercise at the Korea Combat Training Center (KCTC)

Associate Software Engineer (Industrial Placement)

Vitality (UK Health & Life Insurer)

Jul 2023 – Jul 2024

Bournemouth, UK

- Contributed to a **proof-of-concept migrating REST APIs to GraphQL**, then delivered and maintained the resulting production backend services (NestJS, TypeScript) within a Scaled Agile Framework (SAFe) team
- Developed and optimised an internal React-based API testing tool that automated endpoint extraction from OpenAPI specifications to streamline test creation, and was **adopted by multiple engineering teams** beyond the original team

PROJECTS

Nexus — Voice-First AI Agent for Job Tracking | React, TypeScript, Node.js, Groq, MCP

2026

- Built an MCP server from scratch exposing **3 typed tools** (add, list, and update job applications via Notion) that a Groq-hosted Llama 3.3 70B model calls autonomously from spoken input, replacing manual tracking with hands-free voice logging via the Web Speech API
- Deployed a live public demo with per-IP/global-daily rate limiting, timing-safe key comparison, and a self-cleaning sandbox reseeded every 30 minutes — letting anyone test the full voice-to-action loop with **zero setup**

JPMorgan Chase — Computing in Business Week (1st Place) | Python, Flask

May 2022

- Won **1st place** translating JPMorgan stakeholder requirements into a shipped full-stack solution, earning an invitation to a 2-day workshop at JPMorgan's Bournemouth office

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, Kotlin, SQL (PostgreSQL, SQLite)

Backend, Frontend & Tools: FastAPI, Node.js, NestJS, GraphQL, REST APIs, React, Docker, Git

AI / Cloud: AWS Bedrock, RAG Pipelines, LangChain, LLM Evaluation (RAGAS), Prompt Engineering, Vector Search (Weaviate, ChromaDB), Model Context Protocol (MCP), AI Agents

Certifications: AWS Certified AI Practitioner, Apollo Graph Developer — Professional & Associate
